OPTOS® ULTRA-WIDEFIELD RETINAL IMAGING

Forgues Eyecare is proud to provide Optos®, a state-of-the-art, quick, **non-invasive scan**

- Allows your eye doctor to study the inside of your eye without dilation.
- Early detection is crucial; Optos® imaging **should be done annually.**
- Images captured are used as a screening tool for
    - Cataracts
    - Glaucoma
    - Signs of macular degeneration
    - Diabetic complications
    - Retinal holes
    - Retinal detachments
    - Hypertension/high blood pressure complications
    - Cancers
- This permanent digital record allows your doctor to **monitor changes**.
- Not every office has this technology, therefore, they dilate.
- Under some circumstances dilation may still be necessary.

- Optos® imaging is covered by a fee of $39, which may be self-paid at your appointment with cash, check, credit card, FSA or HSA.

☐ Yes, I would like to have Optos® imaging at my appointment.

☐ No, I am refusing Optos® imaging and acknowledge that dilation may be used.
(add 20-30 minutes to exam)
